I've Made

- Websites, 2D and 3D, for both personal and business use.
- Sign systems in use in many buildings across the gulf south.
- 3D models and prints of parts used in various mechanical applications.
- Python scripts for G-Code conversion and processing as well as API data retrieval and display.
- Custom Digital Signage displaying tailored Webpages that pull live data from Web-hooks and APIs.
- Sign mounting systems that use compliant mechanisms for ease of install and removal.
- Many varieties of custom LED illuminated logos for businesses
- 3D printed art and sculpture.
- IOS apps and games for work and play.
- VR Chat Quest compatible worlds.
- Furniture. Including a table, shelving, a sewing desk, and drawers.
- A complete vehicle wrap as well as a variety of vinyl graphics for all manor of applications.
- A solar/AC powered mechanical spit roast capable of cooking a 200 pound pig.
- Several wedding videos and slideshows.
- Several corporate videos for in house advertising.
- A variety of short films and videos.
- A feature length movie.

Experience

FABRICATOR - A&A SIGNS INC – 2008-2022

I was hired as a machinist who hadn't really run a CNC Mill before, but my prior experience with CAD software and vinyl graphics got my foot in the door. My role would expand over the years as I learned every aspect of the business. I was an amazing shop and I had a great time working there. My responsibilities would include product design, prototyping, maintaining a working codebase, system integration, and automation. Over time, I came to develop a passion for workflow efficiency and put my programming and mechanical skills to use creating a number of time saving improvements. We were able to dramatically cut waste and produce large industry quantities of signs with a very small crew working less than full time. It was really a team effort and a great one. My contributions usually came by way of functional design or R&D. Some that I am most proud of include:

- Developing machining techniques to increase quality of parts as well as material yield.
- Writing python scripts that automated job organization, file creation, and visualization.
- Developing better mounting mechanisms that saved install time and reduced waist.
- Organizing supplies and tools with custom build shelving to maximize our use of space.

OWNER AND OPERATOR - HALF DAY STUDIOS LLC – 2012 - 2014

Didn't make any money with this one but managed to go from zero coding experience to releasing an IOS Game called Shubru after only two years.

OWNER AND OPERATOR - SIMPLETIN PICTURES LLC – 2004 - 2010

My partner and I started our filmmaking business out of high school. Our goal was to make a movie and our plan was to finance that movie through local video production. We did many videos, at first for friends and family, but were able to save up from our day jobs to purchase camera equipment and eventually were making money from the business on its own. We put all the money back into equipment and used it to make our movie. The band broke up not long after we finished but it was a fun ride and I'm proud of what we accomplished.

MAINTENANCE - PEPSI AMERICAS – 2006-2007

Was hired as a maintenance person. My responsibilities mainly included cleaning and assisting with general building maintenance including painting, plumbing, electrical. A position opened up in the sign department and I learned how to draw, cut, weed, and apply vinyl graphics. I also learned a lot about general mechanics and handyman sort of things.

KENNEL ATTENDANT - CAUSEWAY ANIMAL HOSPITAL – 2003-2005

Day job cleaning cages, feeding, walking, and bathing both dogs and cats. I use to work double shifts 3 days a week so I could make my 40 hours and use the other 4 days for making movies. True Story.

Skills

- Blender
- Javascript
- Python
- Illustrator
- Inkscape
- Premier Pro
- After Effects
- Rhino
- G-Code
- Flexi-Sign
- CNC Machining
- Laser Cutting
- 3D Modeling
- 3D Printing
- Budgeting
- Basic Mech. Engineering
- Basic Electrical Engineering
- Product Design
- Game Dev
- IOS Dev
- HTML/CSS
- Graphic Design
- Video Production
- Video Editing
- Automation
- Unity 3D
- Logo Design
- SVG programing
- Spacy NLP
- Stable Diffusion
- ThreeJS
- Skepticism
- NumPy
- GarageBand
- Basic IT
- VR Dev
- CG Rendering
- VR Chat World Dev
- ffmpeg
